

How do you check the quality of your schedule?

Steelray Project Analyzer (SPA) analyzes your Microsoft® Project, Project Server, and Oracle Primavera P6 schedules to help you quickly find potential problems. SPA applies patent-pending criteria to your schedule and creates dashboards and Microsoft® Office reports.

Features

- Works with Microsoft® Project, Project Server, and Oracle Primavera P6.
- Create reports as Excel spreadsheets, PowerPoint presentations, Word documents, web pages, or dashboards.
- Customize reports and existing criteria or develop new criteria using our flexible and powerful criteria editor.
- Click on dashboard links to navigate directly to the problem areas in your schedule so they can be addressed.
- Includes a Trace Tool that calculates longest paths, a Circular Chain Detector that finds and reports on circular dependencies, a 14 Point Assessment tool that uses DCMA formulas, and a tool that compares two schedules.

Benefits

- **Saves Time:** How many hours do you spend creating reports? SPA takes seconds to produce a report that can take hours to create manually.
- **Uncovers Hidden Problems:** Uncovers hard to find problems that might otherwise be ignored.
- **Improves Your Schedule:** How do you know what's missing from your schedule? A higher quality project schedule will contribute to the ultimate success of the project.
- **Promotes Consistency:** A common set of criteria helps promote enterprise-wide standards for project schedule quality.
- **Provides Clear Insight:** Clean, easy-to-read reports assist with auditing and compliance responsibilities.
